Stainless steel luxury art flower pot

Laser cut hollow flowerpots

Grade: AISI304/AISI316L/AISI201/AISI430

Surface: Mirror/Hairline/Bead Blasted/Vibration, etc

Color: Gold/Coffee/Bronze/Black, etc

Size: Length and Width range 10cm-100cm

Height range 10cm-100cm

Thickness range 0.8mm-2.0mm

Application: This product can be used as the outer barrel of ordinary flowerpots to protect the flowerpots made of plastic materials from cracks and discoloration. It can be used for indoor and outdoor decoration.

Merit: This product is made of stainless steel, with strong corrosion resistance, beautiful appearance, and durable. The hollow patterns and colors can be customized according to customer demand to meet the different requirements and occasions. The appearance surface, the pattern or LOGO can be customized according to customer requirements.

Application

In order to create beautiful and unique flowerpot, we will spend a lot of effort on the production process, from the previous deep drawing forming with hydraulic machinery through the stretching mold, to the later stamping forming with thinner stainless steel plates, to the current plate shearing, bending, laser cutting, welding technology with more and more effect procedures including plastic spraying, titanium plating (PVD ion coating), fluorocarbon spraying, and bronze aging. These techniques make the stainless steel flowerpots become more and more pretty and durable. So far, most of the stainless steel flowerpots are made by laser cutting, plate shearing and other processing technologies to obtain the most basic shape required. Then go to planing groove bending processing. The role of this processing method is to turn the flat plate into each different three-dimensional part of the stainless steel flowerpot. Then, by welding, they are combined to obtain a complete

PVD&AFP&LOGO

Grade: AISI304/AISI316L/AISI201/AISI430

Surface: Mirror/Hairline/Bead Blasted/Vibration, etc

Color: Gold/Coffee/Bronze/Black, etc

Size: Length and Width range 10cm-100cm

Height range 10cm-100cm

Thickness range 0.8mm-2.0mm

Application: This product can be directly used as a flowerpot, where soil is placed to plant flowers and plants. It can be placed indoors or outdoors without fear of sun exposure or wind and rain.

Merit: This product is made of stainless steel, with strong corrosion resistance, beautiful appearance, and durable. The appearance and color of this product can be customized according to customer requirements, and the pattern or LOGO can be customized.

Application

Titanium-plated flowerpot is a kind of stainless steel flowerpot with unique metal color. After the stainless steel flowerpot is made and processed, titanium-plating is performed, and a unified surface processing treatment titanium-plating processing is required. This processing method is to coat some other non-ferrous metal particles on the stainless steel surface by electroplating or water plating, and then bake it at a corresponding high temperature to increase its firmness. Because of this unique protective film, the titanium-plated stainless steel flowerpot has stronger corrosion resistance and a more beautiful appearance, so it is loved by many customers.

Nowadays, various sectors attach great importance to greening and environmental protection construction. Whether it is real estate projects, sales offices, or municipal road administration projects, a large number of flowers and plants are required to let people feel relaxed and comfortable. As a necessity for greening flowers and plants - flower pots are more and more demanding, flower pots are generally placed outdoors, and the outdoor environment is complex and changeable. When you choose flower pot, the material is particularly important. Traditional flowerpot materials include: wood, pottery, cement, glass, etc. Wood is affected by termites, it's not used for a long time and is easy to corrode; ceramic is fragile; although cement has a long service life, it's not good-looking; the glass is beautiful, but it's also fragile and it's more suitable for interior decoration. Stainless steel flower pots are made of many materials and environmentally friendly, durable, plastic, and relatively affordable, that's why it has been widely used in recent years.

Artistic flower pot

Grade: AISI304/AISI316L/AISI201/AISI430

Surface: Mirror/Hairline/Bead Blasted/Vibration, etc

Color: Gold/Coffee/Bronze/Black, etc

Size: Length and Width range 10cm-100cm

Height range 10cm-100cm

Thickness range 0.8mm-2.0mm

Application: This product is mainly used as a decoration in an artistic environment. It can be put into water. It can be used as a vase and plastic flowers can be directly put into it for decoration.

Merit: This product is made of stainless steel, which has strong corrosion resistance, good-looking, durable. The shape of this product can be customized according to customer demand. The appearance of this product can be customized according to customer requirements, and can be customized patterns or LOGO.

Application

Advantages of stainless steel flowerpots

1. Stainless steel flowerpots have strong corrosion resistance. They are resistant to water and chemical corrosion so that when we use stainless steel flowerpots to grow potted plants, it can avoid damage of the flower pots from watering or various outdoors harsh weather conditions.
2. The stainless steel flowerpot has good physical properties. The stainless steel flowerpot is not only resistant to high temperature but also low temperature, so that our green plants will not die due to the variation of the external temperature difference.
3. The stainless steel flower pot has strong hardness, and it will not break if it falls from a high place, but pay attention to it during use. If the floor is high, you must pay attention to fixing the stainless steel balcony flower pot to avoid unnecessary accident occurred
4. Stainless steel flower pots have strong plasticity; some special-shaped stainless steel flower pots can be seen everywhere in some specific places, and some are even designed and manufactured by designers as the symbol of a project. All of them can be easily produced, and the coloring process in the last stage of processing also makes the stainless steel flowerpot look beautiful, and it is more regarded as a work of art rather than just a utensil.
